# Adjusting Universal Joint Tension

When assembling the arm with monitors of differing weights, you may find that the tension of the universal joint needs to be adjusted to ease movement or to maintain the desired monitor position. If so, adjust as follows:

- Remove the four plastic universal joint covers
- Find the nylon nut (not the screw head) and use the included wrench to adjust the tension.
- Use one hand to support the monitor and adjust the tension of the universal joint.
  - Clockwise : more tension
  - Counterclockwise : less tension
- When the desired tension is achieved, replace the four plastic covers.

## Caution:

- Support the monitor during the adjustment procedure.
- Only adjust the nylon nut (not the screw head).
- Do not disassemble the universal joint .
