

MY SOUNDSPACE

SOUND FOR A SENSE OF SILENCE

Martin Ljungdahl Eriksson, Doctoral Candidate in Informatics with specialization work integrated learning.

At Stockholm Furniture Fair 2018, the project was presented as a new prototype where sound technology is implemented in Edsbyn's chair, Resolve Play.

My Soundspace is a research project aiming to answer the question "Is it possible to add sound for a sense of silence?"

Today's open offices and meeting spaces create great values in terms of togetherness, spontaneous meetings, better sharing of knowledge and ease of direct communication between employees. At the same time, noise is a growing problem. In this research project Edsbyn and doctoral candidate Martin Ljungdahl Eriksson address this issue through personalized dynamic sound environments that create invisible spaces in the room.

With My Soundspace it is possible to design your own personal sound environment, tailored to your own needs.
