Thomas Eriksson

Thomas Eriksson Arkitektkontor (TEA) was founded in Stockholm in 1988. Since its inception, TEA has worked on projects in different scales and unique environments all over Sweden as well as internationally. Their interior projects often concern environments with high demands on functionality and quality.

The architect Thomas Eriksson has also designed award winning products and furniture. Their designs are represented in the permanent collections at MoMA in New York, Nationalmuseum – Sweden's Museum of Art and Design and Nasjonalmuseet in Oslo.

“Clients often desire things that do not exist”

"We have worked with Edsbyn for many years and it is very exciting to now be a part of a relaunch with a new identity, more designers and an expanded collection. Edsbyn owns a great craftsmanship in industrial production, which has gradually moved from flat pack furniture to also include soft seating in order to deliver complete interiors. It is fantastic that Sweden has a furniture company with such a long and genuine heritage as Edsbyn." / Thomas Eriksson

A desk with the right proportions and features for an effective workspace.

Neat Table

Neat Table

When the floor space is limited you need solutions that can make use of every inch. Neat Table is a desk with the right proportions and features to give you an effective workspace where it is needed. It has been important for us to design furniture which also could be used at home, and Neat Table is a desk which really fits in everywhere, no matter if it is in a hotel, office or bedroom.

Neat Table is characterised by its clear lightness and delicate profile of the table top and leg frame. The metal leg frame and wooden tabletop, which can be combined in different colors, along with electrical outlets and an elegant apron up front, make this table a long-awaited addition to the NEAT series.

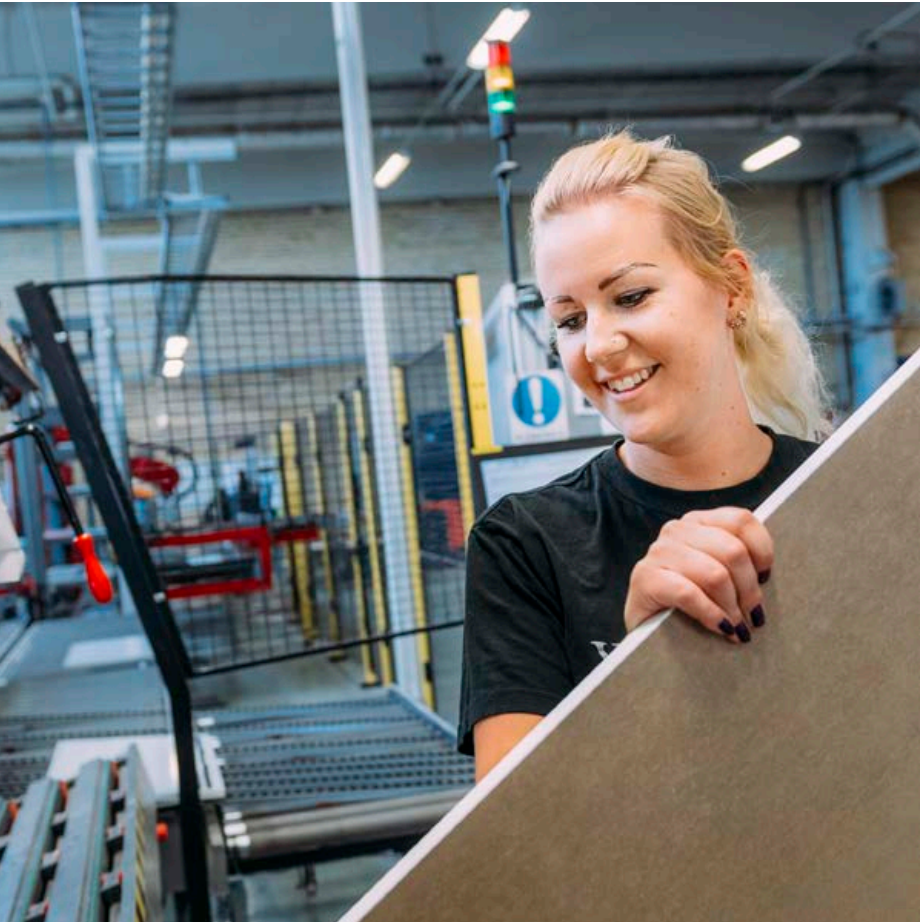

The shape is also the result of an economical use of materials; no component should be too advanced or heavy, and none should be thicker than necessary to conserve resources.

Sustainability

Edsbyn strives to be your natural choice when making furniture selections while considering sustainability and care for the environment. We are constantly working to improve our production processes and carefully select all of the raw materials we use.

ISO Certified Production

Edsbyverken is certified according to quality and environmental management standards ISO 9001 and ISO 14001. We expect materials from our suppliers to fulfil the criteria for environmental certification – and we require our suppliers to accept ethical and social responsibility, just like Edsbyn does.

ISO 14001 – Environmental Management System
An EMS according to ISO 14001 is a systematic and structured approach for all types of organizations to reduce environmental impact, and used in the right way it also supports continuous improvements for the business.

ISO 9001 – Quality Management System
The QMS is a tool to reach continuous improvements and adjust the business to meet customers needs. It includes everything from how you meet your customers needs to avoiding malfunctions.

Certified Products

Certified according to Möbelfakta means: Technical quality standards for sustainability, stability, safety and for surface resistance.

Environmental standards for materials and products. The environmental standards primarily relate to raw materials and components used during manufacturing, while the product standards relate to the completed item of furniture.

Producers and subcontractors undertake systematic occupational health and safety work and comply with current occupational health and safety legislation.

All materials and surface treatments used for Neat Table are approved for public environments with high wear and tear, and will last for many years without the need for maintenance.

Climate-Smart

Stand Hi & Lo

The stand of model Hi and model Lo consists of iron parts that are manufactured and lacquered in Europe. They are certified according to ISO 9001:2015 for quality and ISO 14001:2015 for the environment. Renewable sources provide 100% of the electricity used in production. The steel is made of approximately 30% recycled material.

The stand is dismantlable, allowing for the replacement of parts and renovation to extend the product's lifespan.

Stand Hi-Lo

Neat Hi-Lo is manufactured in Sweden and contains steel with around 30% recycled materials. The front support legs are available in Swedish steel manufactured in Sweden. The stand is constructed in a way that makes it easy to disassemble for repairs or part replacements.

Tabletop

The core of the tabletop is made of chipboard, and the chipboard is manufactured of upto 100% recycled material.

The surface material on the tabletop is Veneer or HPL (High-Pressure Laminate), available in various colors and finishes.

Elevating Spaces since 1899

Edsbyn Factory

The secret of our success is the ability to change and adapt.

What began in 1899 as a small Joinery Workshop in the community of Edsbyn, grew into one of the largest furniture factories in the Nordics, and over the years our work has been characterised by progressive endeavours.

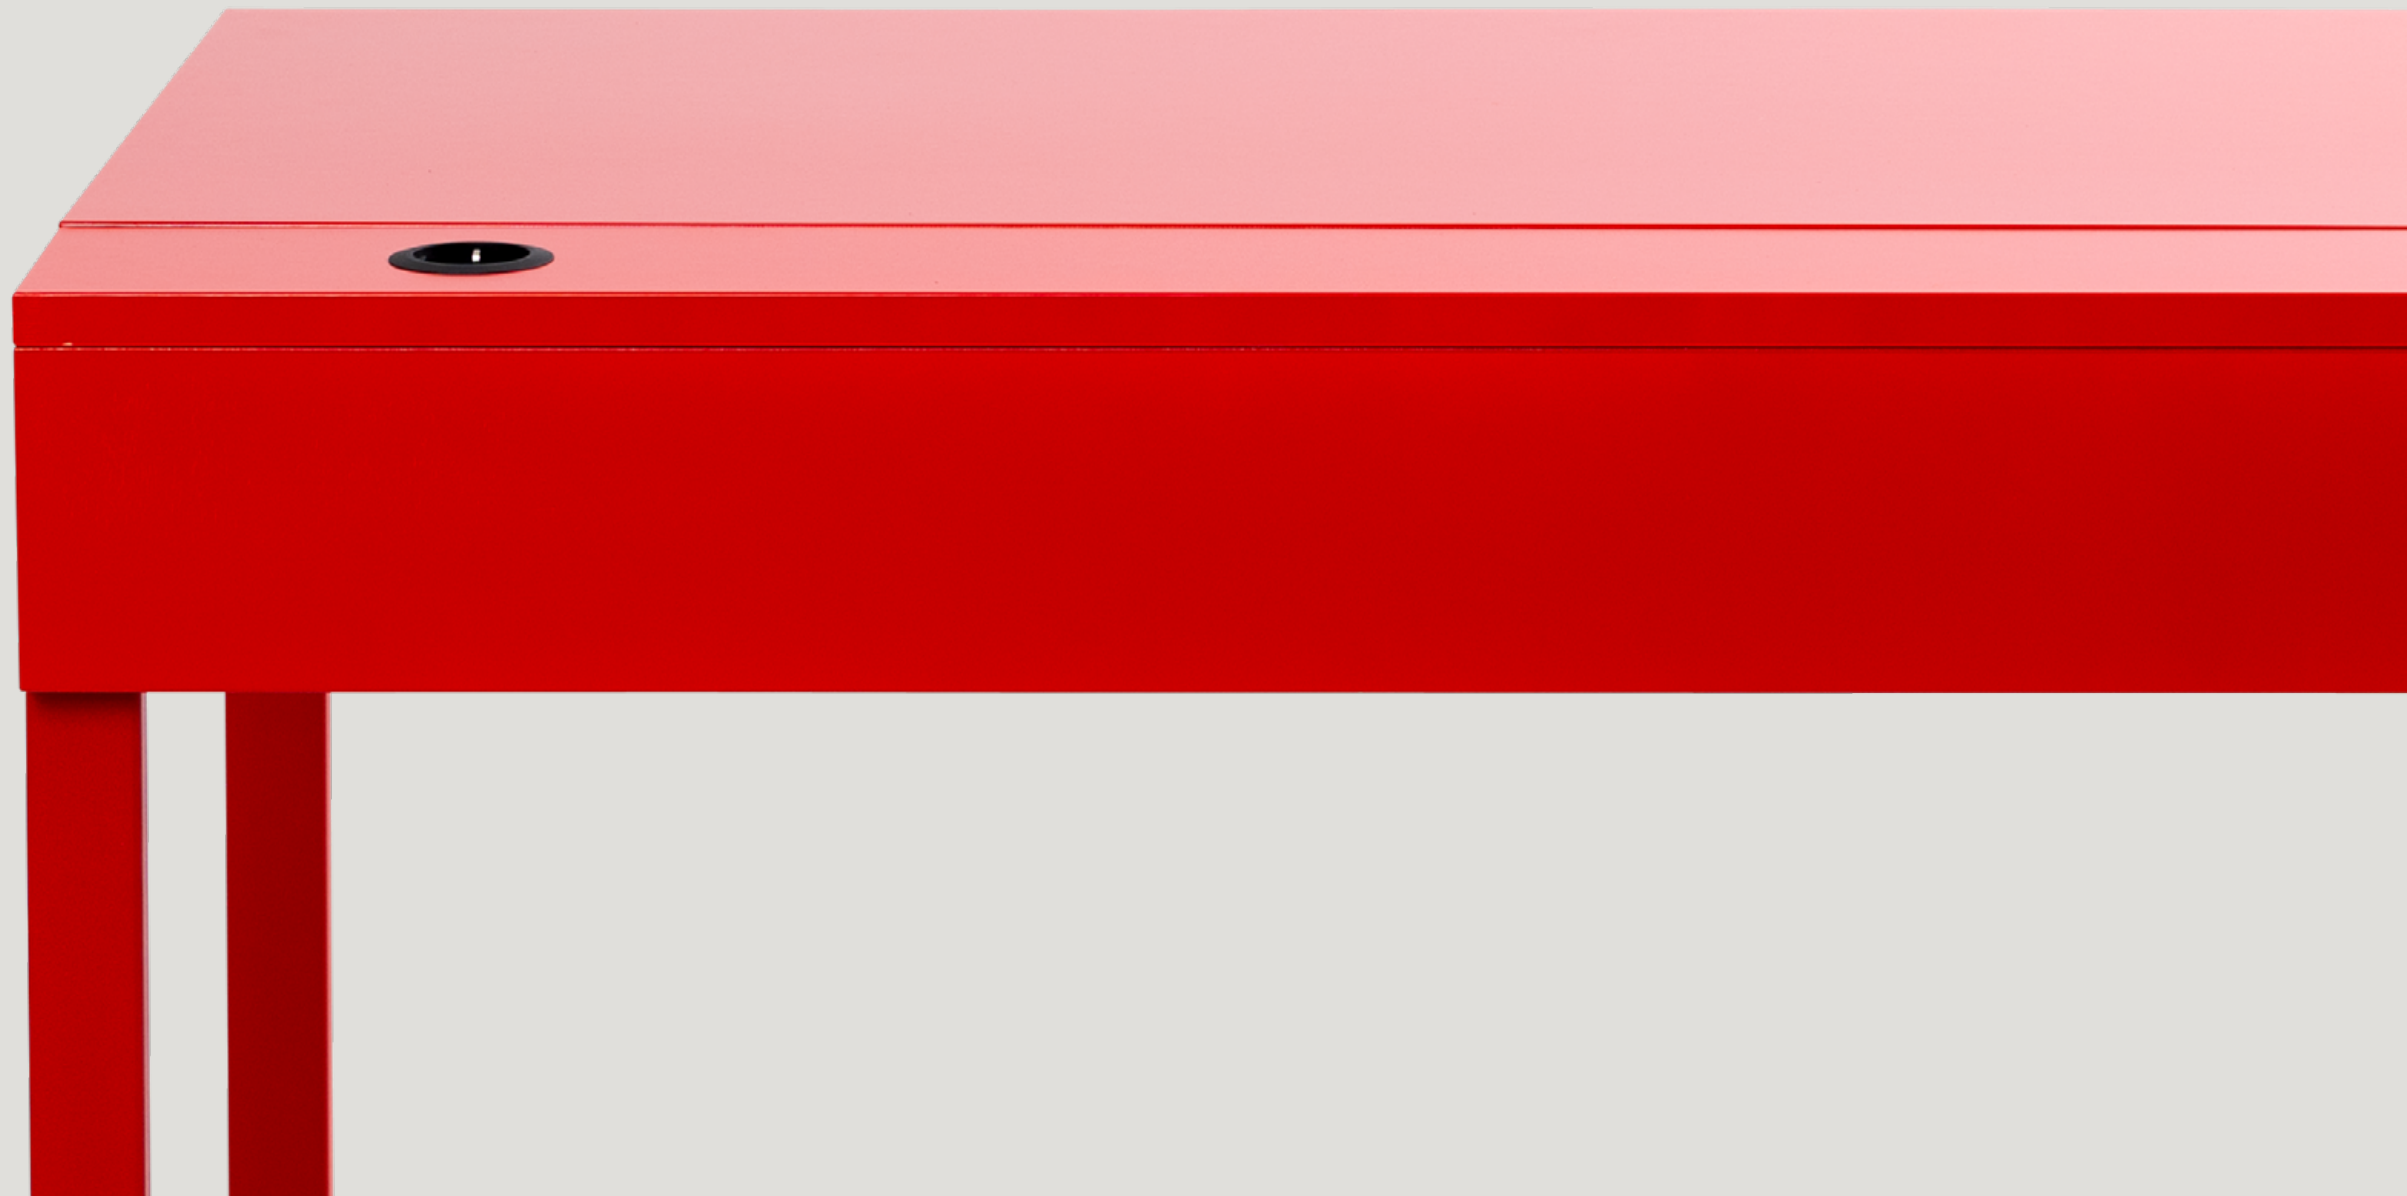

Between 1934–1984 we produced wooden skis for the Ministry of Defence, Olympic gold winners and families. Out of the waste material we manufactured

windsor chairs, which quickly became a classic and a staple in Swedish homes.

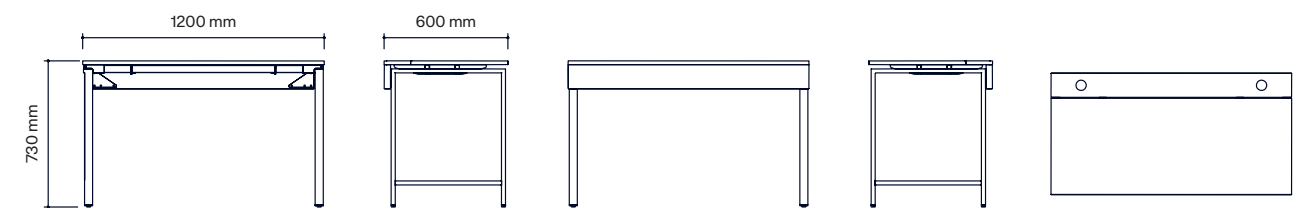

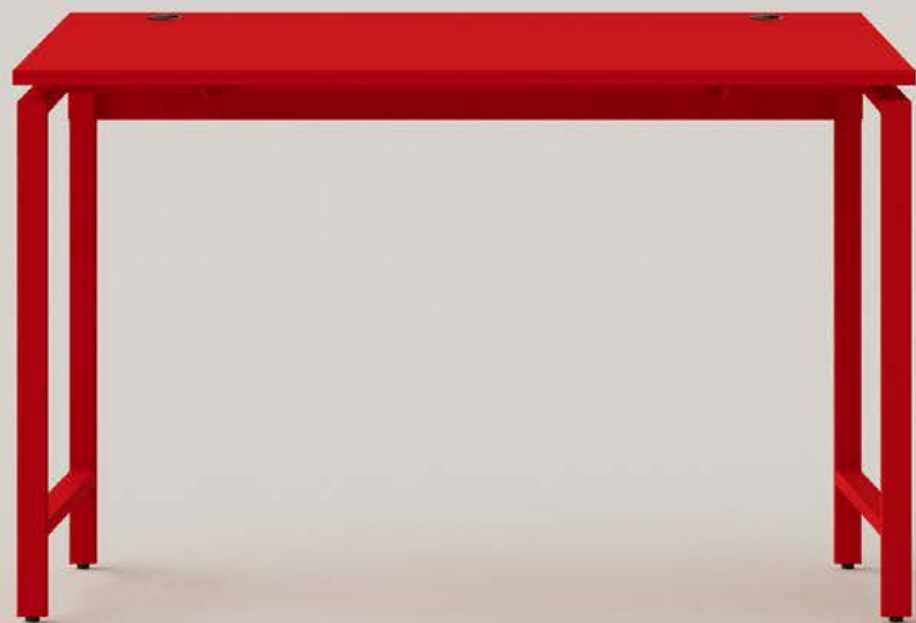

For many years we operated Sweden's first plywood factory and mastered the technique of form-pressed wood. This contributed to the innovative veneer seat for the wooden chair Fanett (1955), which became widely recognised through the collaboration with the Finnish designer Ilmari Tapiovaara.

A light structure with a metal leg frame and the table top in wood, which can be combined in different colours.

Color & Trim

Customized furniture with extensive configuration possibilities is our specialty. Color & Trim displays a small selection of the color schemes our selected materials offer as standard orders. All materials are carefully selected with environmental and sustainability as our top priority.

Finish

All the finishes that we offer in Color & Trim are sustainable and suitable for environments with heavy daily wear and tear.

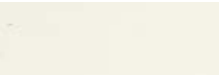

Possible to choose wide,
easy to choose wise.
